

Exercise and common interview question

Assume you have a string "**this is a test string**".

You need to write a code to reverse the string.

The output should be "**string test a is this**".

Implement the knowledge you are learned in previous lectures.

This challenge will utilize knowledge of strings, if conditions, and for loops and some built-in functions also.

Try to do some checks for the input string to make sure it is a valid string.
